

Bio

Sarah Lesmeister is a Senior Environmental Scientist (Specialist) for the California Department of Water Resources, Environmental Water Quality and Estuarine Studies Branch. Sarah is currently conducting research with multiple universities and state agencies on the effects of drought on harmful algal blooms and zooplankton communities in the Sacramento-San Joaquin Delta. Additionally, she serves on multiple interagency teams as technical expert on water quality, nutrients, contaminants, harmful algal blooms and lower trophic food web dynamics. Sarah received her Bachelors of Science degree in Evolution and Ecology and Biodiversity from UC Davis. She also received her Ph.D. in Ecology from UC Davis as a Delta Science and National Science Foundation GK-12 fellow
